EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The abstract has been amended since the abstract as originally filed exceeds 150 words (157 words, according to an MS Word processing word count). See MPEP 608.01(b), which cites 37 CFR 1.72 (b), and states:

A brief abstract of the technical disclosure in the specification must commence on a separate sheet, preferably following the claims, under the heading "Abstract" or "Abstract of the Disclosure." The ***abstract*** in an application filed under 35 U.S.C. 111 ***may not exceed 150 words in length***. The purpose of the abstract is to enable the United States Patent and Trademark Office and the public generally to determine quickly from a cursory inspection the nature and gist of the technical disclosure. The abstract will not be used for interpreting the scope of the claims.

Emphasis in bold italics added. Thus, the following amendment has been made to the abstract:

(I) The amended abstract filed on December 11, 2006 has been deleted in its entirety, and replaced with the following shortened abstract:

--A disk cartridge including lower and upper shells, a rotation wheel housed rotatably in the cartridge and which houses a disk and has formed therein a second opening, corresponding to a first read/write opening in the lower shell, through which the housed disk is exposed to outside, a pair of shutter plates provided between the lower shell and rotation wheel and which

operates with the rotation of the rotation wheel to uncover the first and second openings when the latter are coincide with each other, and a locking member including a locking portion installed pivotably to the upper shell and engaged in an engagement concavity in the rotation wheel to lock the rotation wheel in a position where the pair of shutter plates covers the first opening, and an unlocking portion which cancels the engagement of the locking portion in the engagement concavity.--
